

Skamania County Department of Public Works

Post Office Box 1009
Stevenson, Washington 98648
Office (509) 427-3910

Maintenance Guidelines for Snow and Ice Events

Skamania County follows guidelines for our winter maintenance operations that were developed to provide information to all county residents on what they may expect during snow and ice events. The following information should allow all constituents of the County the knowledge of how we respond to snow and ice events.

How Winter Maintenance Levels are Determined

A Maintenance Level (ML) classification is assigned to each public road in the County. A road's classification is determined by use. Public Works staff considered traffic volumes, whether it is for residential or business use (to include churches) and safety to incorporate school bus routes. Maintenance levels will be reviewed annually as the road's criteria could change which could raise or lower the level of service to your road.

The intent of the classifications is to provide a level of service that Skamania County residents can plan for throughout the winter on the road where they reside.

It is very important to realize that these guidelines are just that, guidelines. A localized emergency may take precedent that could increase or decrease the planned services as described in any area of the County.

Maintenance Levels are divided into five categories:

ML 1 Defined

Maintain standards to the highest degree of consideration, to provide comfort and convenience to the driving public. Roads are paved and travel speeds are normally 35 M.P.H. or higher with Average Daily Traffic counts (ADT's,) of 250 and above.

Plow to maintain snow accumulations to less than 4". Provide sand at hills or intersections that have been identified as hazardous areas but are secondary to snow removal when it is still snowing and accumulating. ML 1 roads will receive the highest priority.

ML 2 Defined

Roads are paved and travel speeds are normally 25 M.P.H. with ADT's of less than 250. Normally, Collector and Local roads with over 25 residences, or a road that serves a functional need for public access, will fall into this level.

Plow to maintain snow accumulations to less than 6". Provide sand at hills or intersections that have been identified as hazardous areas but are secondary to snow removal when it is still snowing and accumulating.

ML 3 Defined*

Roads that have travel speeds normally over 20 M.P.H. with ADT's of less than 100. Normally, Local roads with less than 25 residences will fall into this level.

If a ML 3 Road is utilized by a school district as a bus route recognized by Skamania County, it will be maintained the same as a ML 2 Road on days when school is open. For all other ML 3 Roads, it will be common to accumulate snow in excess of 12" for extended time periods during storms of intense snowfall. Sand will not be used as a traction aide on a routine basis. During extreme conditions, residents should plan up to 5 days without service.

ML 4 Defined*

All other roads that do not meet ML 1 - ML 3 guidelines.

Plow all ML 4 Roads after all other classes of roads have been completed. Accumulations of snow can be expected to exceed 12". These roads will not be plowed on a routine schedule and will not be plowed if there is not a need by residential traffic. Sand will not be used as a traction aide. Residents should plan for up to 7 days without service during extreme conditions.

ML 5 Defined

No Winter Maintenance will be performed on a ML 5 Roads.

Sanding Operations

Skamania County will sand historically hazardous areas throughout the County to improve traction but applications are secondary to snow removal when it is still snowing and accumulating. Additional sand applications will be utilized for freezing rain and black ice events as needed.

***ML 3 and 4 Roads may not be plowed using overtime personnel.** In the event that emergency services are required to respond, the caller will contact the Sheriff's Department and inform them that their road has not been plowed. The Sheriff's Department will dispatch the Road Division to clear the snow for emergency services access.

Road Classifications

Each citizen should review the attached list of Skamania County Roads and their classifications. Some roads have multiple classifications which are identified by mileposts on the road. Make sure you know what to expect during our winter storms.

Private Roads or Driveways

The Public Works Department maintains a list of people who can provide winter maintenance services for residents who reside on private roads or driveways. Skamania County cannot complete work off of the public road system.

When emergency services are required, (fire or medical) road crews will respond to provide access for emergency services at the direction of the Skamania County Sheriff's Dispatch.

Snow Berms and Mailboxes

The county receives numerous phone calls during snow events indicating that snow berms left by the plows do not allow access to the county road and not being able to get to your mailbox. It is the policy of Skamania County that during normal or routine snow plowing, we do not plow these open; we simply do not have the resources to complete this task.

When snow events require heavy equipment (graders or loaders) to move the snow back off of the road, creates a very heavy snow berm. We will attempt to provide additional heavy equipment to remove these berms. However, there may be a substantial time delay in getting to all of the driveways as plowing is much faster than the berm removal process.

Winter Tips

To prepare for the winter months be sure to have your vehicles mechanically ready. Having four-wheel drive or higher clearance vehicles will help on secondary roads; use tire chains or traction tires; plan your trips, leaving early and slowing down will greatly improve your ability to get where you want to go.

Planning ahead is important! Have food and medical supplies in your home to last a week. Be aware of weather reports and plan ahead for even longer periods of time if a major storm is in the forecast.

When clearing your driveway and snow berms, pile the snow to the left side as you face your house, especially as you get closer to the road. This will prevent the plow from pushing the material you just shoveled, back into your driveway again. Throwing snow onto the road also creates obstructions in the roadway and can create hazards to other motorists. State Law prohibits placing snow or ice from private property onto any public road or sidewalk.

Winter Tips (cont)

Vehicles parked alongside the road within the county road right of way can be damaged during the snow removal process. Parking your vehicles in your driveway and as far away from the road as possible, especially during hours of darkness, also helps the snowplow operators to complete their routes more efficiently and ensures the safety of your vehicles.

As always, the department will take calls or emails to answer any questions you may have.

Larry Douglass
